Headline news

Warning to adults: children notice everything

Adults are really good at paying attention only to what you tell them to — but children don't ignore anything. That difference can actually help children do better than adults in some learning situations, a new study suggests.

Time and Change: 150 Years of Ohio State in conversation with Provost Bruce McPheron

Join Tamar Chute, university Archivist and Ohio State's head of archives, for the launch of "Time & Change: 150 Years of The Ohio State University." Provost Bruce McPheron provided the afterword in this magnificent compilation of the journey of one of the world's pre-eminent educational institutions. The event begins at 7 p.m. at Gramercy Books. The photographic retrospective of Ohio State showcases its rich history and decades of growth.

Electromagnetic fields may hinder spread of breast cancer cells

Electromagnetic fields might help prevent some breast cancers from spreading to other parts of the body, Ohio State engineers and OSUCCC – James researchers have found. The study showed that low intensity electromagnetic fields hindered the mobility of specific breast cancer cells by preventing the formation of long, thin extensions at the edge of a migrating cancer cell.

Your OSUHP provider network is changing. We are making an important change to the health care provider network for The Ohio State University Faculty and Staff Health Plans. We are reorganizing our provider network into two networks: Premier Network and Standard Network. Restructuring our provider network is expected to promote better health outcomes over time by encouraging integrated care. Check your mail or visit 2020providers.osu.edu for more information.
