LOCAL ADVISORY COMMITTEE

All Physics Professors at Cairo University
Selected Physics Professors from Egyptian Universities
Selected Physics Professors from Egyptian Institutes
Selected Physics Professors from Egyptian Industries

INTERNATIONAL ADVISORY COMMITTEE

Adel M. El Nadi, Faculty Engineering, Cairo University
Ahmed Azzawi, Nuclear Energy center
Ahmed Hassanein, Purdue University
Ali Abdou, for Zewail City for Science & Technology
Alim Hussein, Aligarh Moslem University
Chang Hee Nam, GIST
D. Weaire, Trinity College Dublin
Enam Chowdary, Ohio State University
Fazal-e-Aleem, Habib University
Gilles Renaud, CEA
Gui Lu Long, Tsinghua University
Hans-Joachim Kunze, Ruhr-University
Hosam Gharib Abdelhady, Taibah University
Jai Pal Mittal, India Academy of Science
John Collier, ULF, RUTHERFORD APPL. Laboratory
Jonathan R. Ellis, CERN
Jongmin Lee, GIST, QBF
Kholmurad, Khasanin, Moscow State University
Obayya Salah, Zewail City for Science & Technology
Martin Richardson, University Central Florida...
Mike Downer, Texas Austin University
Nasr Hafez, Shanghai Jiao Tong University
P. Loukakos, IESL, FORTH
Ping Xui, Tsinghua University
Reinhold Schuch, Stockholm University
Richard Freeman, Ohio State University
Roger Hutton, Fudan University
Serge Koutchmy, Ins. Astrophys., Paris
Sultana Nahar, Ohio State University
Thomas Kuehl, GSI & Darmuschdat University
Todd Ditmire, Austin Texas University
Yaming Zou, Fudan University
Yehea Ismaiel, Zewail City for Science. & Technology
Yosr Gamal, NILS, Cairo University
Mohi Mansour, Faculty of Engineering, Cairo University

TUESDAY 16 DECEMBER 2014

All Participants are kindly advised to be at the Marine Club, Magless Kjadet Al Thawra St., at maximum 09:30 to catch the Falandra boat in order to enjoy the Nile Cruz during session 2&3.

Int. Invited Speakers are requested to kindly catch the minibus in front of the guest house at 08:30 to take them to the Marine Club in time.

Heading to Luxor, two buses in front of Cairo University Guest house, will leave at 15:30. **ALL PARTICIPANTS ARE KINDLY REQUESTED TO BE ON TIME**

REACHING LUXOR PYRAMISA HOTEL IS EXPECTED 22:00
STUDY OF OUR STAR THE SUN

Sultana N. Nahar
The Ohio State University, Columbus, OH 43210, USA

Abstract:
Our sun is studied extensively as it is the standard for a typical star. However, knowledge about the Sun still has large discrepancies. Recent determination of abundances of common elements such as carbon, nitrogen, oxygen, etc. are up to 30-50% lower than the current standard values. Much of these discrepancies could be reduced if a fundamental quantity, the opacity of solar plasma, is revised upwards. Propagating radiation in plasmas is absorbed and emitted by the constituent elements that constitute the opacity effect. Recently measured opacities at the Sandia National Laboratory on the Z-pincher nuclear fusion device, under stellar interior conditions created on the Earth for the first time, are 30-400% higher than predictions for the most crucial element Iron. Theoretically, new large-scale calculations under the Iron Opacity Project reveal the existence of extensive and dominant resonant features in high energy photoionization. I will illustrate these and discuss how their inclusion should provide more accurate opacities, and close the gap between observed and predicted opacities and elemental abundances in the Sun.
This work was supported partially by the U.S. National Science Foundation and the Department of Energy.
