

Bangladesh Astronomical Society

12th September 2020

Professor Sultana Nahar,
APS Fellow
Dept of Astronomy, McPherson Lab, The Ohio State University
140 West 18th Avenue, AST, Columbus, OH 43210, USA

Dear Prof. Nahar

On behalf of the Bangladesh Astronomical Society (BAS), I humbly invite you to join our bi-weekly Live Session on Astronomy which portrays individuals from Bangladesh who are currently working in this field. As an Advisor to BAS, you know that BAS has almost three decades of vibrant history in astronomy outreach activities in Bangladesh. This particular pandemic situation is challenging in many respects, and BAS is trying to keep alive astronomy through online based outreach activities. This live series is particularly motivated from the fact that, young minds in the country who are interested in astronomy would be immensely inspired to meet the brilliant astronomers and astrophysicists from their own land, and that will help to create a new generation of researchers in this field.

Your extraordinary contribution to stellar physics research is widely known throughout the globe, which also gave you the title, “The Iron lady”. Having you in this session will be glorifying for this effort of ours and will inspire our participants greatly.

The session will be live on a social media – Bangladesh Astronomical Society’s Facebook page and will also be available on BAS YouTube channel afterwards. It will be our immense pleasure to have you on Sunday, September 13, at 12 pm (Eastern time).

We are eagerly waiting for your kind response to this invitation.

Best Regards

Professor Farseem Mannan Mohammedy
General Secretary
Bangladesh Astronomical Society.
